

FRONTEND COMPETENCY TEST

We ask you to complete an exercise which would help us evaluate your practical skills. Please note that we will discuss your solution only as part of this recruitment process.

Create web application based on the following requirements:

- User should see a list of accounts.
- Each account on the list should display: Name, Profit & Loss, Account Type.
- Use the following API endpoints:
 - o GET <https://recruitmentdb-508d.restdb.io/rest/accounts>
 - o GET <https://recruitmentdb-508d.restdb.io/rest/accounttypes>
- Please use the following header to authenticate requests:
 - o 'x-apikey': '5d9f48133cbe87164d4bb12c'
- User should always know that something is being loaded (e.g. spinner/fake content).
- Feel free to use any frontend libraries to complete this task.
- It would be good if your solution contains at least one test.
- Please send the final application as an email attachment or Github link.

Example result:

Name	Profit & Loss	Account Type
CFD – demo	€ 16679	CFD account
My CFD	\$ 0	CFD account
New Spread bet	\$ -679	Spread bet account
Spread bet	\$ 0.23	Spread bet account
Spread bet – demo	\$ 16.211	Spread bet account
Stockbroking	€ 200045	Share dealing account
Stockbroking - DEMO	\$ 200045	Share dealing account
